

Covid-19

As the COVID-19 virus continues to spread over the world, we want to inform you about the current situation at Dutch Filtration.

Our production facilities are operating normally and Supply Chain is under control. Our production of filtration systems units and filter elements continues, while always ensuring the health and safety of our employees, customers and suppliers. Our offices are open, but with a limited number of employees. The majority of our colleagues are working from home, but remain available by telephone and/or e-mail. Orders can still be shipped and goods delivered, and we continually monitor the advice of the WHO.

We have a large stock of raw materials and finished products to meet customers' demand. Fortunately we are experiencing very little disruptions to our supply chain such as lead times due to the COVID-19 outbreak. If and when we foresee any negative impact we will communicate this immediately and directly to you to minimize any potential disruption to your business.

To ensure the health of our employees and business we have implemented the following:

Non- essential visitors to our offices and manufacturing plants are prohibited at this time

Safety rules for our employees :

- Stay at home if you have a mild cold or any other illness symptoms
- Wash your hands regularly
- Cough and sneeze on the inside of your elbow (or into a paper tissue which is then disposed of)
- Do not shake hands, avoid touching your face
- Keep distance from co-workers
